Thinking outside the 'health' box: interventions for malaria control

Steve Lindsay

From Challenges in malaria research
Basel, Switzerland. 10-12 October 2012

In the last decade malaria has declined sharply in many countries in the tropics, due largely to the massive expansion of control programmes. However, the future may not be as bright as drug and insecticide resistance rises and aid budgets constrict. Since it is well recognised that malaria declined in many parts of the world due to socio-economic improvements, here I consider whether development today could be an effective weapon against malaria.
